## ***Ibhola For Hope***

I am thinking of creating a Non-profit Organization to provide coaching and training for young boys in township areas interested in soccer. I would like to open it up to both new and experienced players so that they can learn and build together as they escape the life in the streets and instead of getting into illegal activities like drugs, narcotics, unwanted pregnancies, and all different forms of violent activities. They will rather be training with me and a few other experienced coaches who have some form of experience having lived in the township or understand the young boys so that they do not feel any form of resentment from the coaching body because the idea is to enable a keen understanding and passion for the sport and hopefully they in the future are able to build a career within the sport. If that is not the case, then it teaches them valuable skills that will aid them in their preferred field of work. The main goal is to create and save young lives from getting into heavy illegal acts. I plan to start this organization in one township then hopefully if things go well, I expand it further into other communities. My organization will be funded by the BEE Financial assistance. The Broad-Based Black Economic Empowerment. As a young black male, I can go and ask for assistance in terms of funding. I will also go and ask for funding in the more privileged private schools so that I can get a little bit of funds from them in ways like, for every game their team wins each player's parent donates a little bit of money to my organization. I will also bring the kids in my program to those games to support so that it does not only end in the field so that they can also build connections and bonds with other races and people from diverse cultures.

## PART 2

For part 2 I decided to change a lot of things because my part 1 was nowhere near where I wished it were to be.

For Part 2 I added a news page, and I added more content and changed my website assets,

I changed my logo to black and white. I styled my nav bar, I added background images to some of my pages and left the others blank /white

### **Improvements to part 3**

First, I am adding a comprehensive improvements page to my assessment which I did not do to my part 2. I am going to break down each section in terms of their individual pages starting with the home page.

### Home Page

I am changing the background image because it was too bright, and you could not clearly read the content on the page well. I changed the image to this one.

It is a kid because my website is about kids playing soccer.

I am changing the font color to a blue , these are the specifics `font-size: 70px;`

```
color: rgb(23, 206, 219);
```

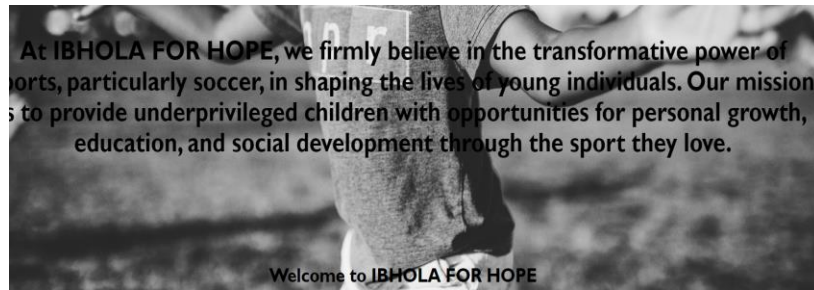

```
text-align: center;
```

```
font-family: 'Gill Sans', 'Gill Sans MT', Calibri, 'Trebuchet MS', sans-serif;
```

to add a bit of color to my website. I am changing the footer and putting it at the bottom.

I am removing the “check us out button.” I changed the whole font of the homepage to black . I am going to improve my CSS

I am going to add a reg form in the footer of my homepage, including JavaScript that we

worked on in class the other day.

[Home](#) [About](#) [Services](#) [Contact](#)

### Reg Form

Name:

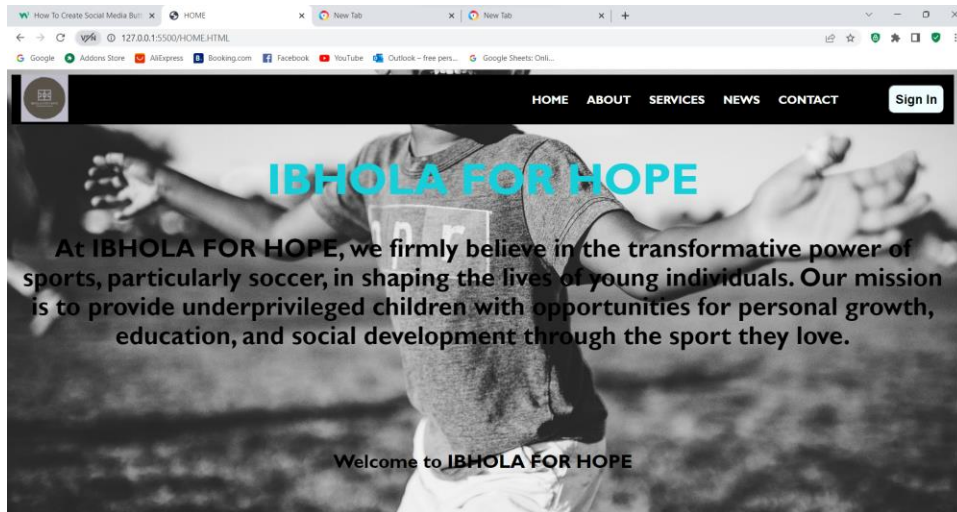

Email:

Here is the JavaScript.

This is my final home page.

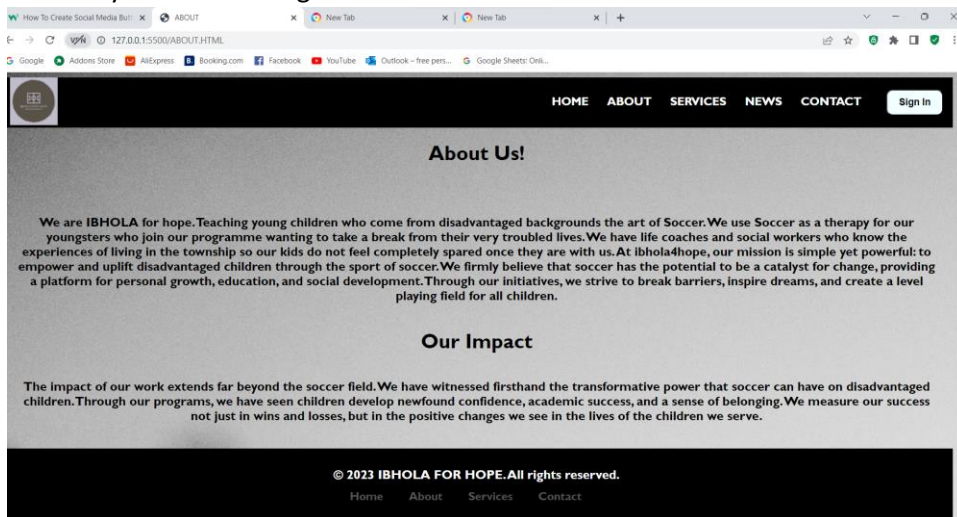

## About Page

I did not change much here except for that I added a background image, the same one I used for my home page to keep the theme the same.

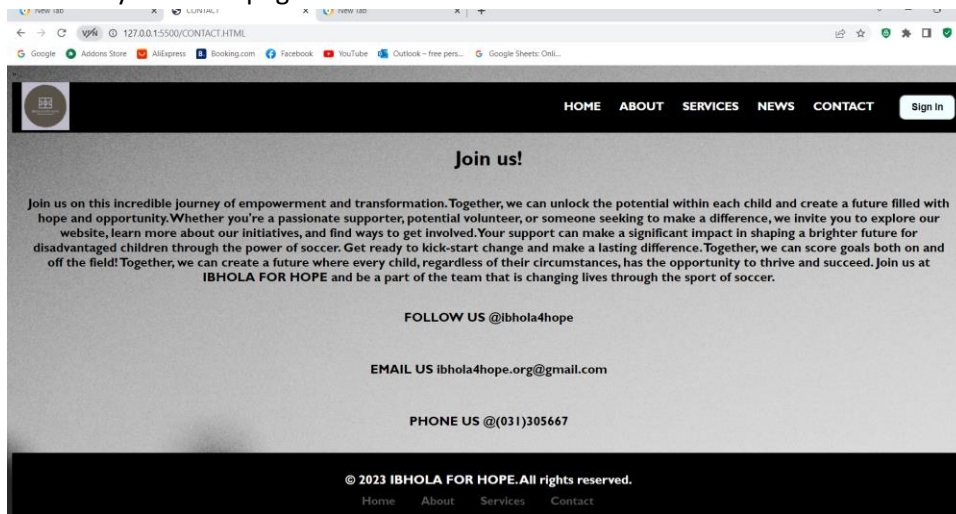

This is my final About Page.

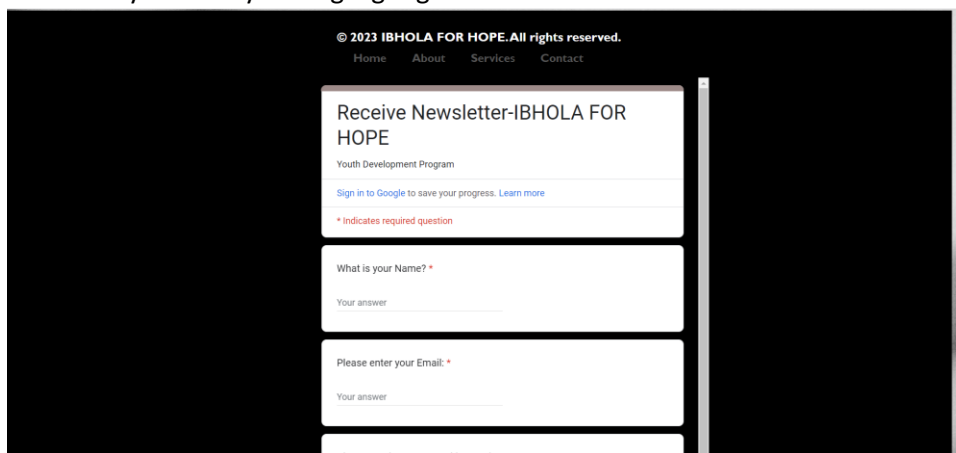

## Contact Page

I added a background image, I increased the font size to 20px, I moved the footer to the bottom of the page. I edited the footer by changing the color to a black to complement the theme of my website, I added break lines for a little more spacing.

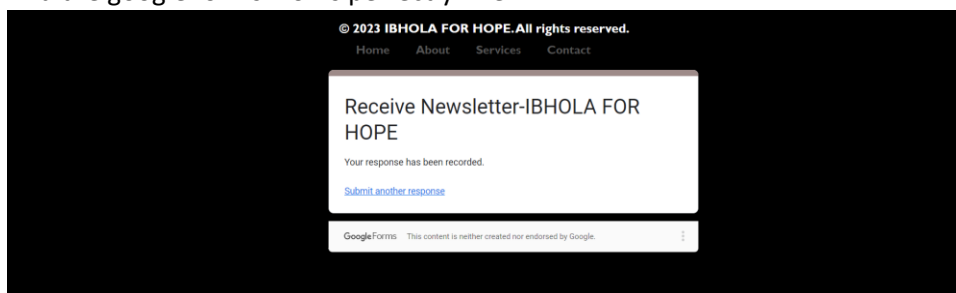

This is my about us page:

I edited my footer by adding a google forms:

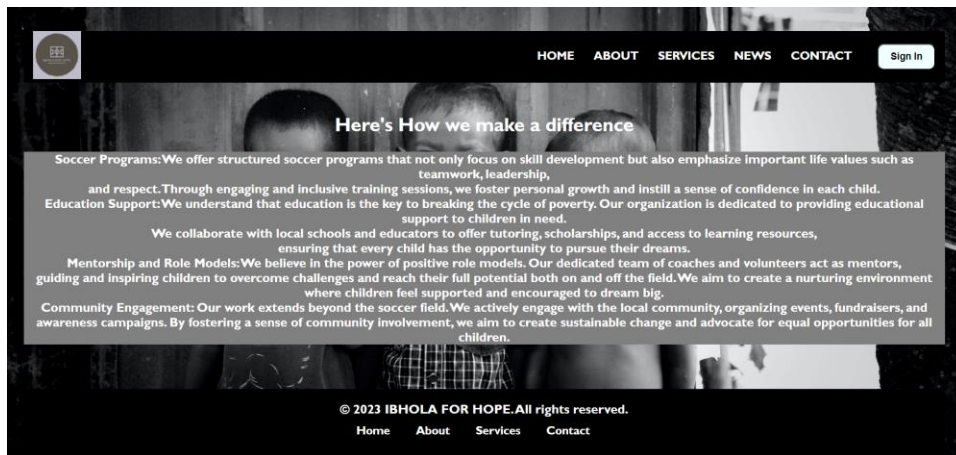

And the google forms works perfectly fine:

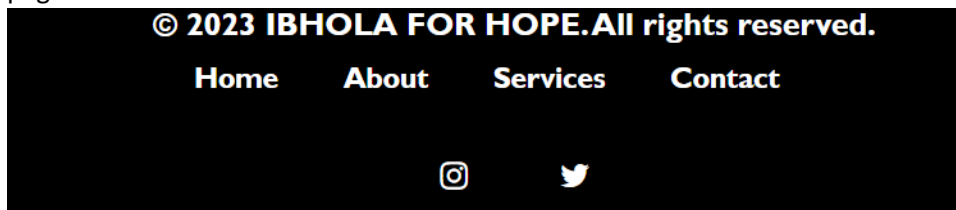

## Services Page

This page was my favorite one at the start. But now because my font could not be seen clearly, I added a grey card at the back. To see the text more clearly:

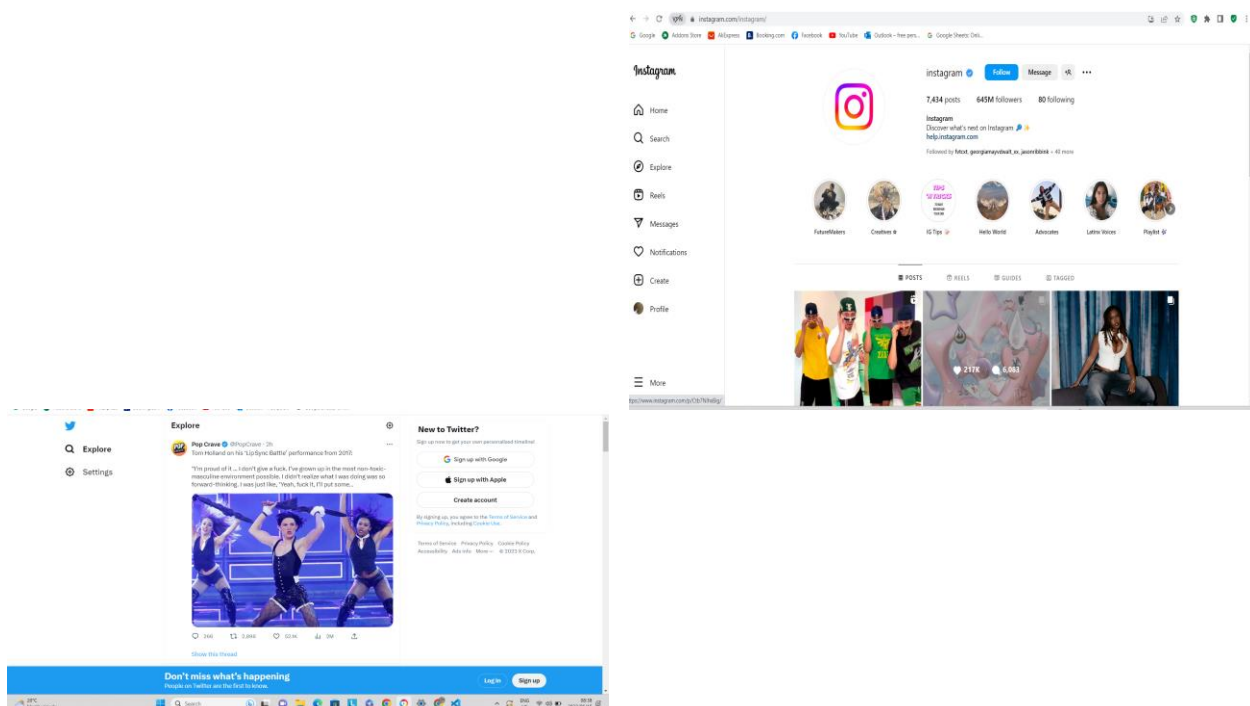

It does make it look a little bit better but then it still looks good.

I also added footer links to add to the services so that they can open on them to see our Instagram pages:

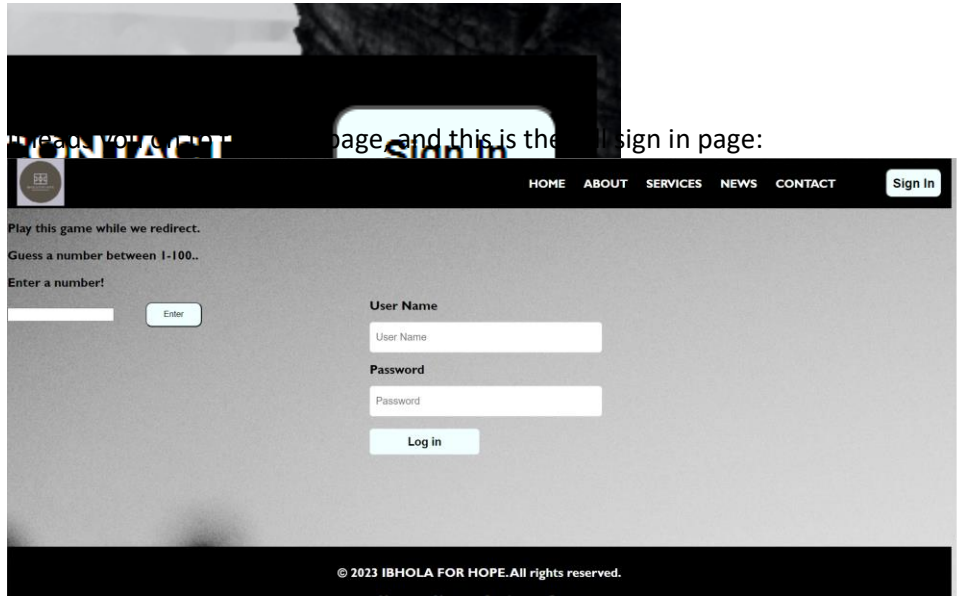

And the links work, they redirect you to the Instagram pages I linked.

## Sign In Page

I added this sign in button in all my navigation bars with a hover effect light blue:

I am now going to breakdown the different sections of this page:

Firstly, the center of the page is where you login:

A close-up screenshot of the login form. It features a 'User Name' label above a white text input field containing the text 'ayabonga'. Below this is a 'Password' label above another white text input field filled with dots. At the bottom of the form is a light blue button with the text 'Log in' in bold black font.

And the login button takes over and leads you to a new page.

The top left of the page has a game that you can play while you are scrolling on the page.

The game is for guessing numbers and it tells you when your guess is low and stuff:

Play this game while we redirect.

Guess a number between 1-100..

Enter a number!

Play this game while we redirect.

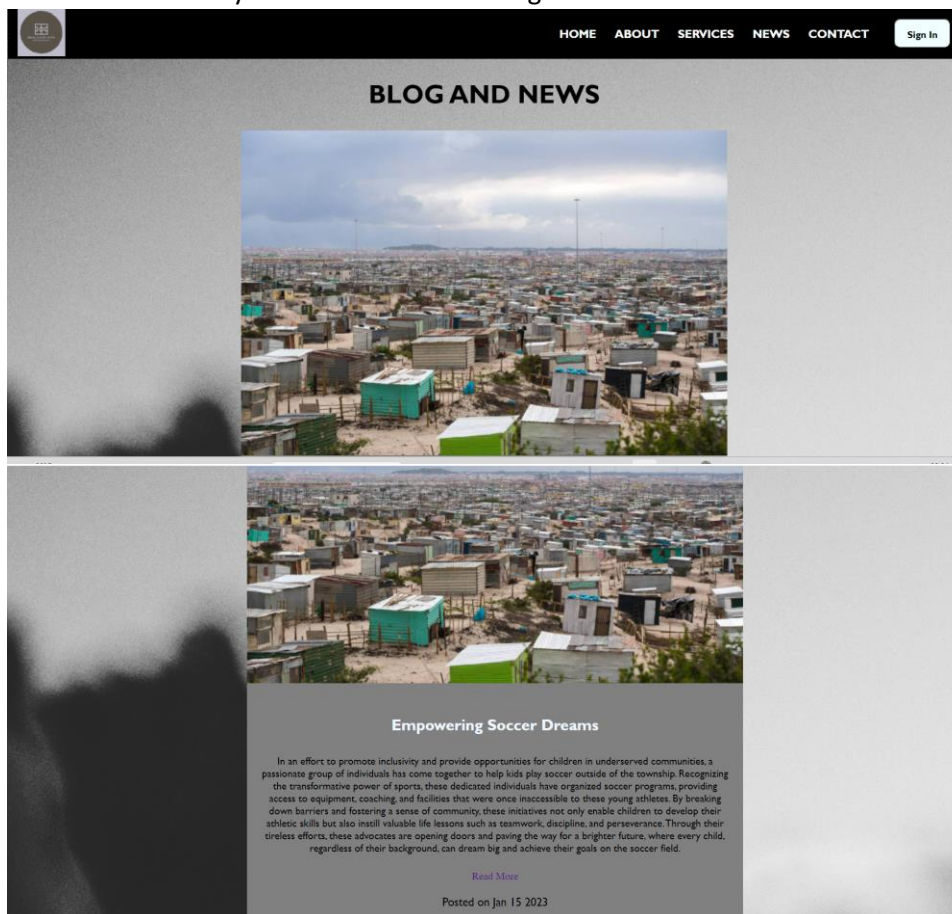

Guess a number between 1-100..

Guess is too High

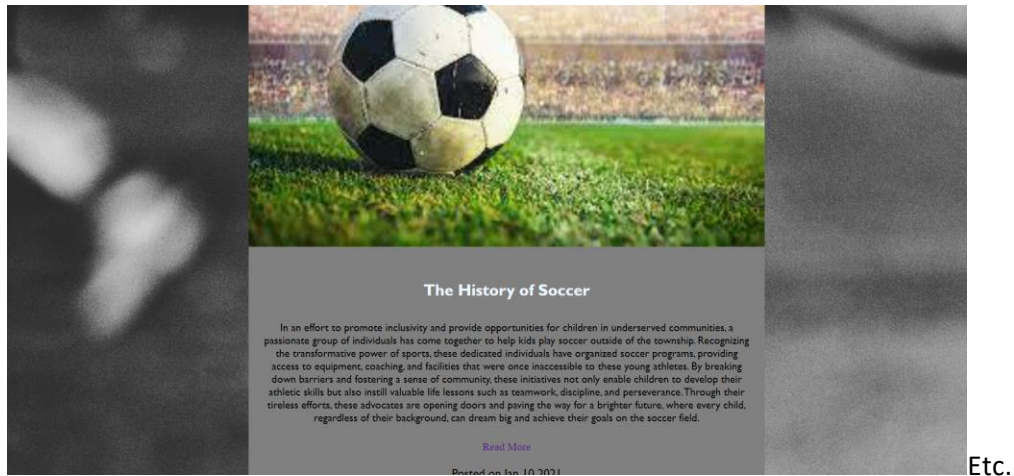

## News Page

I added some styling, I added CSS (Cascading Style Sheets), I implemented a new method I found, I created a column scroll down and added the background image, I added CSS, I changed the font-size, I made it to the same font-family as all the other pages, the background of the column I set to grey.

Each block is a story or “news” about our organization.

And there is more where that came from:

And that is the final look of my website. It Is responsive, I added my improvements to part 2 and I covered every section in the rubric.
